

INSTRUCTIONS FOR RESETTING BROTHER DR2200 DRUM

Before you begin

Don't touch the drum cylinder or expose it to sunlight. The drum is very sensitive to light and also touch and is very easy to damage.

DO NOT TOUCH THE DRUM

The Brother printer counts drum rotations and shuts the drum unit down when it reaches its page yield of 12,000 pages at 5% coverage.

If your drum was working correctly prior to the "DRUM STOP" message appearing, you can reset the drum unit on your printer and continue printing. We do this by telling the printer we have installed a new drum unit.

1. With the printer switched ON - Remove drum unit and toner cartridge from the printer. (they are joined together)
2. Replace drum unit and toner cartridge back into the printer.
3. We now need to reset and trick the printer into thinking you have a new drum installed.
4. Open the front cover of the printer

HL PRINTERS

DCP / MFC PRINTER

5. Now we need to tell the printer that a ne drum was installed and reset the drum counter

HL PRINTERS

- Toner
- Drum
- Error
- Ready

Go

Press and hold down **Go** button for about 4 seconds until all the LEDs light up.

Once all 4 LEDs are lit, release the **Go** button

DCP / MFC PRINTERS

Press Clear. To confirm you are installing a new drum unit, press 1

When the LCD shows Accepted, close the front cover

Your drum unit has been reset !

Resetting the drum unit will not improve print quality. It only resets your drum and allows you to continue to print. You decide when to replace the drum unit not the manufacturer !

FAQS

Can I improve print quality?

Small print defects can sometimes be cleared simply by cleaning the corona wire on the drum unit.

Remove the drum and cartridge from the printer. Separate the drum from the toner cartridge.

Clean the primary corona wire inside the drum unit by gently sliding the blue tab from right to left and left to right several times. Return the tab to the home position before you put the drum unit back in the printer. If you do not, printed page may have a vertical stripe.

Help my drum didn't reset!

If the Drum LED is ON after you tried the reset, try cleaning the metal contacts with a dry lint-free soft cloth.

You may need to also power off your printer and computer for 5 minutes to clear the memory if the reset does not work first time.
